DETAILED ACTION

Specification

The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 457589.

EP teaches a middle distillate fuel composition (diesel fuel) that contains from 1000 to 5000 parts by weight of organic nitrate combustion improvers (see page 2, lines 21-51; page 3, lines 18-36). The diesel fuels have cetane numbers in the range of 30 to 60 (see page 3, line 15-17). In fuel A the aromatic content is 36.5, nitrogen content is 5.3, sulfur content < 1, cetane index 48.5 and cetane number 45.3 (see Table pages 4 and 5). The organic nitrates include 2-ethylhexyl nitrate (see page 3, lines 18-30). EP teaches that the fuel composition reduces atmospheric pollution caused by the operation of engines (see page 2, lines 1-5). EP teaches the limitations of the claims other than the differences that are discussed below.

Art Unit: 1714

EP differs from the claims in that it does not specifically teach that the composition is essentially free of one or more heteroatomic compounds selected from pyrroles, indoles, sulfides, disulfides, mercaptans, thioacids, sulfonic acids and/or indolines. However it would be reasonable to expect that these compounds are not present in the fuel given that the sulfur content of the fuel is < 1 ppm and the nitrogen content is 5.3 ppm.

EP also fails to teach the polyaromatic content of the fuel (claim 19). However, it would have been obvious to prepare the fuel with a polyaromatic content of < 11 wt% because diesel fuels rarely contain more than this amount, as shown by the absence of the these compounds in the table of physical properties of the fuel.
